DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-4 and 6-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

3. Claim 1 recites the limitation "a plurality of users devices configured to receive the secure container from the content provider; and the secure container wherein, the secure container contains". The words the container wherein are not understood and leave the claim indefinite and confusing.

Allowable Subject Matter

4. The following is a statement of reasons for the indication of allowable subject matter: Claims 1-4 and 6-14, as best understood, would be allowable if not for the above 112 issue. The examiner attempted to contact applicant to make an examiner's amendment, but there was no answer or voicemail. Claims 15-30 would also need to be canceled.

With regard to claim 1, Rose discloses a similar content distribution system for performing content transaction management, as outlined in the prior office action, but does not disclose a plurality of user devices configured to receive a secure container from a content provider, wherein one of the user devices is a secure container distributing device which receives a primary distribution including the secure container

from the content provider and verifies the authenticity of the secure container, decrypts and extracts the encrypted biometric information template stored in the IDC, and is configured to compare sampling information input by a user of a receiving device which is one of the user devices with the decrypted biometric information template to authenticate the user of the receiving device, the secure container distributing device initiates a secondary distribution after the primary distribution by sending the content key to the receiving device, and the receiving device decrypts and copies the content sent from the secure container distributing device, after the user of the receiving device is authenticated. Adding this secure container distributing device to Rose would not have been obvious to one of ordinary skill in the art since it would add extra processing and steps with no additional security.
